

HIMON PATEL

Computer Engineering Student | Product, Systems & Technology

+91 9574115583 | himon.atlas@gmail.com | [linkedin.com/in/himon-patel-49b174358](https://www.linkedin.com/in/himon-patel-49b174358) | himonpatel.github.io

PROFILE

Computer Engineering student with hands-on project experience across campus-system prototyping, product research, EdTech system design and small IoT builds. Interested in roles where user workflows, product decisions and technical execution intersect.

EDUCATION

Sankalchand Patel University, Visnagar, Gujarat, India

2024 - 2027 (Expected)

B.Tech in Computer Engineering (Lateral Entry)

Sankalchand Patel University, Visnagar, Gujarat, India

2021 - 2024

Diploma in Computer Engineering

SKILLS

Programming: Python (foundational), Go (foundational), HTML/CSS/JavaScript (active learning); academic exposure to C/C++, Java and SQL

Backend / Hardware: FastAPI project experience; ESP32, RC522 RFID, fingerprint-sensor prototyping

Product / Research: Problem framing, systems thinking, user-review analysis, market research, assumption mapping and validation boundaries

Languages: Gujarati, Hindi and English - conversational proficiency; Mandarin Chinese - beginner, learning Pinyin and pronunciation

PROJECTS & RESEARCH

SmartCampus - Engineering Project II | Team Lead

2026

- Led product scope and system design for a multi-role campus operations prototype connecting faculty room changes with student schedules, notifications, room availability and indoor-navigation workflows.
- Implemented and debugged backend and integration flows with AI assistance; designed structured synthetic campus data to test cross-role workflows and expose navigation-data limitations.

Project Atlas - Independent Product Initiative

2025 - Present

- Developing an EdTech product concept around persistent student identity, active learning, progression, institutional participation and learning-driven social connection.
- Developed product architecture, conducted market exploration and mapped key assumptions and validation needs; presented an earlier Atlas concept at ICAICS-26 and subsequently refined its positioning.

Understanding Grab - Independent Product & Company Research

2026

- Completed a seven-part research series covering Grab's evolution, business model, product ecosystem, GrabMaps and R&D/talent footprint.
- Analysed 307 public reviews across four app/user groups to cluster recurring pain points and synthesise product-level observations.

RFID + Biometric Student ID Prototype | ESP32, RC522, Fingerprint Sensor

2026

- Built and tested a hardware prototype for card identification plus fingerprint verification with serial attendance logging.
- Verified the local card-to-user-to-biometric flow in the Arduino serial monitor.

ACTIVITIES & MILESTONES

- ICAICS-26, Sankalchand Patel University (Mar 2026) - Presented an early Project Atlas poster.
- Generative AI Buildathon - Selected for the state-level competition; formed a three-person team.
- Gamified Learning / Game Jam initiative - Proposed the concept at college and helped initiate discussions with a game-education professional.
