

HIMON PATEL

Engineering Student • Product / Systems / Technology
India • [ADD EMAIL] • [ADD LINKEDIN] • [ADD PORTFOLIO URL]

PROFILE

Engineering undergraduate building stronger technical execution while working across product research, systems thinking, EdTech and user/problem analysis. I use projects to test assumptions, understand implementation constraints and separate what a prototype proves from what still needs validation.

EDUCATION

[ADD COLLEGE / UNIVERSITY NAME], India | B.Tech Engineering | Current undergraduate

SELECTED WORK

SmartCampus | Engineering Project-II • Team Lead • 2026

- Led product scope and system design for a multi-role campus operations prototype connecting faculty room changes, student schedules, notifications, room availability and indoor-navigation workflows.
- Implemented and debugged substantial backend/integration work with AI assistance; used structured synthetic campus data to test workflows and expose limitations in the spatial/navigation model.

Project Atlas | Independent Product Initiative • 2025-Present

- Developing an EdTech product concept around persistent student identity, gamified learning, adaptive guidance, institutional participation and learning-driven social connection.
- Conducted directional market research, product architecture work and assumption/validation mapping; distinguish technical, product, behavioural and ecosystem validation rather than treating a prototype as proof.

Understanding Grab | Independent Product & Company Research • 2026

- Completed a seven-part research series on Grab's evolution, business model, product ecosystem, GrabMaps and global R&D/talent footprint.
- Read and analysed 307 public reviews across four Grab-related apps/user groups, clustering recurring complaints while separating user-reported symptoms from unverified technical root causes.

RFID Student ID Prototype | ESP32 + RFID • 2026

- Built a working ESP32/RFID student-identification prototype and completed the hardware/microcontroller implementation; database integration was not completed, so I present it as an IoT prototype rather than a full product.

INITIATIVE

- Gamified Learning / Game Jam: proposed the initiative at college, prepared awareness material and helped connect stakeholders with a professional contact at Press Start Academy; discussions are ongoing and no finalized collaboration is claimed.

TECHNICAL FOUNDATION

Python - foundational • **Go** - foundational • **HTML/CSS/JavaScript** - active learning

FastAPI / backend work - project experience • **ESP32 / RFID** - small IoT prototype experience • **Git / GitHub** - preparing first public project repository

Product / Research: problem framing • systems thinking • public review analysis • market/user research • assumption mapping • validation boundaries

SELECTED CREDENTIALS

Harvard CS50's Introduction to Programming with Python • CodeChef Learn Go • **Selected LinkedIn Learning product-management coursework** (strategy, roadmaps, technical PM, customer development)
