

HIMON PATEL

Computer Engineering Student | Software, Product & Systems

+91 9574115583 | himon.atlas@gmail.com | [linkedin.com/in/himon-patel-49b174358](https://www.linkedin.com/in/himon-patel-49b174358) | himonpatel.github.io

PROFILE

Computer Engineering student with project experience across Python/FastAPI systems, product research, structured testing and system design. Built and tested multi-role software workflows, developed Python projects with automated testing, and analysed public user feedback to identify recurring product pain points. Interested in roles where technical execution, data-informed problem solving and product decisions intersect.

EDUCATION

Sankalchand Patel University, Visnagar, Gujarat, India

2024 - 2027 (Expected)

B.Tech in Computer Engineering (Lateral Entry)

Sankalchand Patel University, Visnagar, Gujarat, India

2021 - 2024

Diploma in Computer Engineering

SKILLS

Programming: Python (foundational), Go (foundational); academic exposure to Java, C/C++ and SQL

Backend / Web: FastAPI project experience; HTML, CSS and JavaScript (active learning)

Tools / Testing: Git/GitHub; pytest

Product / Research: Problem framing, systems thinking, user-review analysis, market research, assumption mapping

Hardware: ESP32, RC522 RFID, fingerprint-sensor prototyping

Languages: Gujarati, Hindi and English - conversational proficiency; Mandarin Chinese - beginner

PROJECTS

SmartCampus - Engineering Project II | Team Lead

2026

- Led product scope and system design for a multi-role campus operations prototype spanning student, faculty, HOD/admin and indoor-navigation workflows.
- Implemented and debugged Python/FastAPI backend and integration workflows connecting faculty room changes with student schedules, notifications, room availability and navigation data, using AI tools as development support.
- Designed structured synthetic campus data to test cross-role workflow propagation and identify limitations in the navigation data model.

Make 10 - CS50P Final Project | Python, pytest

2026

- Built a Python CLI arithmetic game with function-based input validation, error handling and brute-force solution search.
- Wrote pytest tests covering number generation, expression evaluation and validation rules.

Understanding Grab - Independent Product & Company Research

2026

- Completed a seven-part research series covering Grab's evolution, business model, product ecosystem, GrabMaps and R&D/talent footprint.
- Analysed 307 public reviews across four app/user groups to cluster recurring pain points and synthesize product-level observations.

Project Atlas - Independent Product Initiative

2025 - Present

- Developing an EdTech product concept around persistent student identity, active learning, progression, institutional participation and learning-driven social connection.
- Developed product architecture, conducted market exploration and mapped key assumptions and validation needs; presented an earlier concept at ICAICS-26.

ACTIVITIES

Generative AI Buildathon - Selected for the state-level competition; formed a three-person team. | ICAICS-26 - Presented an early Project Atlas poster.
